

Onu Joshua Menayo

Software Engineer with hands-on experience in backend development and mobile applications, specializing in financial systems and secure transaction processing. Proficient in building scalable APIs, authentication systems, and resilient backend architectures using Node.js and modern technologies. Passionate about solving real-world problems through technology and delivering reliable software solutions.

SKILLS

- Excellent knowledge of Programming Languages such as C#, JavaScript, Java, Python and SQL for mobile, desktop and web development.
- Strong troubleshooting and debugging skills with software applications
- Adept at Problem Solving, with a background in Data Structures and Algorithms.
- Expert usage of Industry standard tools such as Visual Studio, Unity, WordPress, Godot, Git and AWS for software development.

EDUCATION

Federal University of Technology, Minna

Bachelor of Engineering in Computer Engineering - 4.42 GPA

2018 - 2024

WORK EXPERIENCE

TechVibes International Ltd

Software Development Intern

Sept 2023 – Feb 2024

- Developed and maintained company's OurGroupFund website using modern web technologies
- Implemented responsive web design and optimized user experience across multiple devices.
- Tested and debugged to resolve critical issues.
- Collaborated on Creativity Warehouse website development as secondary developer.

Software Developer

July 2025 - Present

- Engineered the backend of a fintech savings platform in partnership with a microfinance bank, supporting secure and scalable financial transactions.
- Designed and deployed secure authentication and authorization mechanisms, improving user account protection and access control.
- Built a comprehensive audit trail system to ensure full traceability of financial operations and support compliance requirements.
- Collaborated cross-functionally with mobile engineers, delivering well-structured APIs and resolving integration challenges.

WahyaPay

Software Developer

May 2025 - Present

- Developing a scalable installment-based payment platform, contributing across both backend services and mobile application layers.
- Designed and implemented robust retry and failure-handling mechanisms, improving transaction reliability and system resilience.
- Built secure authorization middleware and structured business logic handlers to enforce access control and streamline request processing.
- Contributed to the mobile application using React Native, implementing core features including UI screens, transaction PIN validation, and biometric authentication.

PROJECTS

Fire Outbreak Classification System using Machine Learning

2024

- Designed and implemented an IoT hardware system for environmental data collection using sensors.
- Developed, trained and tested Machine Learning models for image and data classification.
- Developed a centralized server for real-time data processing and automated response execution.
- Integrated all system components for a complete fire detection, classification and response system.
